INDEX TO AUTHORS

A

Abrams, Richard, Altschul, A. M., and **Hogness, T. R.** Cytochrome *c* peroxidase. II. The peroxidase-hydrogen peroxide complex, 303

Altschul, A. M. See *Abrams, Altschul, and Hogness,* 303

Alving, Alf S. See *Flox, Pitesky, and Alving,* 147

—. See *Sendroy and Alving,* 159

Axelrod, A. E., Potter, V. R., and **Elvehjem, C. A.** The succinoxidase system in riboflavin-deficient rats, 85

B

Bachman, Carl. See *Lundgren, Gurin, Bachman, and Wilson,* 367

Barnes, Richard H. See *Swendseid, Barnes, Hemingway, and Nier,* 47

Baumann, C. A., Foster, E. G., and **Moore, P. R.** The effect of dibenzanthracene, of alcohol, and of other agents on vitamin A in the rat, 597

—. See *Jacobi and Baumann,* 65

Beach, Eliot F., and **Teague, D. Maxwell.** A gravimetric method for the determination of methionine, 277

Beard, Dorothy. See *Sharp, Taylor, Beard, and Beard,* 193

Beard, J. W. See *Sharp, Hebb, Taylor, and Beard,* 217

—. See *Sharp, Taylor, Beard, and Beard,* 193

Berg, Clarence P. See *Borchers and Berg,* 693

—. See *Borchers, Totter, and Berg,* 697

Bird, O. D., Vandenbelt, J. M., and **Emmett, A. D.** Adaptation of the Scudi colorimetric method for pyridoxine, 317

Borchers, Raymond, and **Berg, Clarence P.** The effect of conditions of hydrolysis and of prolonged heating upon the optical rotation of sulfuric acid hydrolysates of zein, 693

—, **Totter, John R.,** and **Berg, Clarence P.** Threonine deficiency in hydrolysates of zein prepared by autoclaving, 697

Boyd, Eldon M., and **Clarke, Eleanor L.** The fractionation of cattle blood iodine with alcohol, 619

Brode, Wallace R. See *Mowry, Brode, and Brown,* 671, 679

Brown, J. B. See *Mowry, Brode, and Brown,* 671, 679

Brown, W. L. The threonine, serine, cystine, and methionine content of peanut proteins, 299

Buchanan, John M. See *Vennesland, Solomon, Buchanan, Cramer, and Hastings,* 371

—. See *Vennesland, Solomon, Buchanan, and Hastings,* 379

Buhs, Rudolf P. See *Scudi, Buhs, and Hood,* 323

C

Caldwell, M. L. See *Little and Caldwell,* 585

Campbell, Harold A. See *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link,* 941

Cannan, R. Keith, Palmer, Albert H., and **Kibrick, Andre C.** The hydro-

gen ion dissociation curve of β-lactoglobulin, 803
Cannan, R. Keith. See *Warner and Cannan*, 725
Carter, Herbert E., Glick, Francis J., Norris, William P., and **Phillips, George E.** The structure of sphingosine, 449
Catterall, Alice. See *Eichelberger and McLean*, 467
Chaikoff, I. L. See *Entenman and Chaikoff*, 129
Chargaff, Erwin. The formation of the phosphorus compounds in egg yolk, 505
—. A study of lipoproteins, 491
Clarke, Eleanor L. See *Boyd and Clarke*, 619
Clarke, Miriam F., Lechycka, Marie, and **Light, Amos E.** A supplementary growth factor for *Lactobacillus casei*, 957
Cohen, Seymour S., and **Stanley, W. M.** The action of intestinal nucleophosphatase on tobacco mosaic virus, 863
Conway, Catherine F. See *Young and Conway*, 839
Cooper, Gerald R. See *Neurath, Cooper, and Erickson*, 249, 265
—. See *Sharp, Cooper, and Neurath*, 203
Cori, Carl F. See *Green, Cori, and Cori*, 447
Cori, Gerty T. See *Green, Cori, and Cori*, 447
Cramer, Richard D. See *Vennesland, Solomon, Buchanan, Cramer, and Hastings*, 371

D

Dolan, Margery. See *Sinclair and Dolan*, 659
Drabkin, David L. Spectrophotometric studies. IX. The reaction of cyanide with nitrogenous derivatives of ferriprotoporphyrin, 855
DuBois, K. P. See *Potter and DuBois*, 417
Dunn, Max S. See *Stoddard and Dunn*, 329

E

Eckstein, H. C. See *Treadwell, Groothuis, and Eckstein*, 653
Eichelberger, Lillian, and **McLean, Franklin C.** The distribution of calcium and magnesium between the cells and the extracellular fluids of skeletal muscle and liver in dogs, 467
Ellis, Sydney, and **Walker, Burnham S.** The action of hippuricase on ring-substituted derivatives of hippuric acid, 291
Elvehjem, C. A. See *Axelrod, Potter, and Elvehjem*, 85
—. See *McKibbin, Schaefer, Frost, and Elvehjem*, 77
Emmett, A. D. See *Bird, Vandenbelt, and Emmett*, 317
Entenman, C., and **Chaikoff, I. L.** The response of lipid metabolism to alterations in nutritional state. II. The effects of overnutrition on the postabsorptive levels of the blood lipids of the dog, 129
Erickson, John O. See *Neurath, Cooper, and Erickson*, 249, 265
Evans, Herbert M. See *Fraenkel-Conrat, Simpson, and Evans*, 107

F

Feeney, R. E., and **Strong, F. M.** The concentration of the substance in blood which is stimulatory for *Lactobacillus casei* ε, 961
Ferry, Ronald M. See *Perlmann and Ferry*, 513
Flox, Jack, Pitesky, Isadore, and **Alving, Alf S.** A direct photoelectric

colorimetric method for the determination of diodrast and iodides in blood and urine, 147

Folch, Jordi, and **Woolley, D. W.** Inositol, a constituent of a brain phosphatide, 963

Forth, Rachel. See *Huff and Perlzweig,* 401

Foster, E. G. See *Baumann, Foster, and Moore,* 597

Fraenkel-Conrat, Heinz. The effect of thiols on the reducing groups of lactogenic hormone, 119

—, **Simpson, Miriam E.,** and **Evans, Herbert M.** The effect of thiol compounds on the activity of lactogenic hormone, 107

Friedemann, Theodore E. Ketosis in Primates. II. The ratio of β-hydroxybutyric acid to acetoacetic acid in the blood and urine, 635

Frost, D. V. See *McKibbin, Schaefer, Frost, and Elvehjem,* 77

G

Glick, Francis J. See *Carter, Glick, Norris, and Phillips,* 449

Green, Arda Alden, Cori, Gerty T., and **Cori, Carl F.** Crystalline muscle phosphorylase, 447

Green, D. E., and **Stumpf, P. K.** Starch phosphorylase of potato, 355

Greenstein, Jesse P., and **Jenrette, Wendell V.** The reactivity of porphyrindin in the presence of denatured proteins, 175

Grinnell, S. W. See *Scholander, Irving, and Grinnell,* 431

Groothuis, Marjorie. See *Treadwell, Groothuis, and Eckstein,* 653

Gurin, Samuel. See *Lundgren, Gurin, Bachman, and Wilson,* 367

H

Haas, Erwin, Harrer, Carter J., and **Hogness, T. R.** Microdetermination of triphosphopyridine nucleotide, 835

Hague, Eleanor. See *Melville, Hofmann, Hague, and du Vigneaud,* 615

Harper, Harold A. Carbohydrate metabolism in thiamine deficiency, 239

Harrer, Carter J. See *Haas, Harrer, and Hogness,* 835

Harris, Tzvee N. See *Zittle and Harris,* 823

Hastings, A. Baird. See *McGee and Hastings,* 893

—. See *Vennesland, Solomon, Buchanan, Cramer, and Hastings,* 371

—. See *Vennesland, Solomon, Buchanan, and Hastings,* 379

Hebb, M. H. See *Sharp, Hebb, Taylor, and Beard,* 217

Hemingway, Allan. See *Swendseid, Barnes, Hemingway, and Nier,* 47

—. See *Wood, Werkman, Hemingway, and Nier,* 31

Hess, W. C., and **Sullivan, M. X.** Cystinuria. The effect of various amino acids on the excretion of cystine, 3

Hofmann, Klaus. See *Melville, Hofmann, Hague, and du Vigneaud,* 615

Hogness, T. R. See *Abrams, Altschul, and Hogness,* 303

—. See *Haas, Harrer, and Hogness,* 835

Hood, Dorothy B. See *Scudi, Buhs, and Hood,* 323

Howe, Paul E. Edward Browning Meigs, 1

Huebner, Charles Ferdinand. See *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link,* 941

Huff, Jesse W., and **Perlzweig, William A.** Studies in nicotinic acid metabolism. III. Metabolism and synthesis of nicotinic acid in the rat, 401

Hutchings, B. L. See *Shull, Hutchings, and Peterson,* 913

I

Irving, Laurence. See *Scholander, Irving, and Grinnell,* 431

J

Jacobi, H. P., and **Baumann, C. A.** The biochemical defect in choline-deficient rats, 65

Jenrette, Wendell V. See *Greenstein and Jenrette,* 175

Johnson, C. R. See *Koenig and Johnson,* 233

Jones, James H. The relation of the pH of intestinal contents to calcium and phosphorus utilization, 557

Jones, Lois M., and **Shinowara, George Y.** Serum inorganic phosphate and "alkaline" phosphatase activity in hypophysectomized rats, 935

—. See *Shinowara, Jones, and Reinhart,* 921

K

Kety, Seymour S. The lead citrate complex ion and its rôle in the physiology and therapy of lead poisoning, 181

Kibrick, Andre C. See *Cannan, Palmer, and Kibrick,* 803

King, C. G. See *Smythe and King,* 529

Kirk, Paul L. See *Tompkins and Kirk,* 477

Koenig, Ruth Adele, and **Johnson, C. R.** Spectrophotometric determination of iron. I. Use of mercaptoacetic acid, 233

Kraemer, E. O. See *Krejci, Stock, Sanigar, and Kraemer,* 785

Krejci, L. E., Stock, A. H., Sanigar, E. B., and **Kraemer, E. O.** Studies on the hemolytic streptococcus. V. The electrophoretic isolation of the erythrogenic toxin of scarlet fever and the determination of its chemical and physical properties, 785

Kreysa, Frank J. See *Van Slyke and Kreysa,* 765

L

Leblond, Charles P. See *Mann, Leblond, and Warren,* 905

Lechycka, Marie. See *Clarke, Lechycka, and Light,* 957

Light, Amos E. See *Clarke, Lechycka, and Light,* 957

Link, Karl Paul. See *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link,* 941

Little, John E., and **Caldwell, M. L.** A study of the action of pancreatic amylase, 585

Longsworth, L. G. See *Woolley and Longsworth,* 285

Longwell, Bernard B., and **McKee, Frances S.** The excretion of estrogens in the bile and urine after the administration of estrone, 757

Lundgren, Harold P., Gurin, Samuel, Bachman, Carl, and Wilson, D. Wright. The gonadotropic hormone of urine of pregnancy. IV, 367

M

Mann, Walter, Leblond, Charles P., and **Warren, Stafford L.** Iodine metabolism of the thyroid gland, 905

McGee, Lemuel C., and **Hastings, A. Baird.** The carbon dioxide tension and acid-base balance of jejunal secretions in man, 893

McKee, Frances S. See *Longwell and McKee*, 757
McKibbin, J. M., Schaefer, A. E., Frost, D. V., and **Elvehjem, C. A.** Studies on anemia in dogs due to pyridoxine deficiency, 77
McLean, Franklin C. See *Eichelberger and McLean*, 467
Melville, Donald B., Hofmann, Klaus, Hague, Eleanor, and **du Vigneaud, Vincent.** The isolation of biotin from milk, 615
Moore, P. R. See *Baumann, Foster, and Moore*, 597
Morris, Daniel Luzon. Lichenin and araban in oats (*Avena sativa*), 881
Mowry, David T., Brode, Wallace R., and **Brown, J. B.** Studies on the chemistry of the fatty acids. IX. A spectroscopic study of methyl arachidonate purified by crystallization and distillation and its alkali isomerization product, 671
—, —, and —. X. The structure of arachidonic acid as evidenced by oxidative degradation and selective hydrogenation, 679

N

Neurath, Hans, Cooper, Gerald R., and **Erickson, John O.** The denaturation of proteins and its apparent reversal. I. Horse serum albumin, 249
—, —, and —. II. Horse serum pseudoglobulin, 265
—. See *Sharp, Cooper, and Neurath*, 203
Nicolet, Ben H., and **Shinn, Leo A.** Does hydroxyglutamic acid occur in milk proteins? 139
—, —, and **Saidel, Leo J.** The lability toward alkali of serine and threonine in proteins, and some of its consequences, 609
Nier, A. O. See *Swendseid, Barnes, Hemingway, and Nier*, 47
Nier, A. O. See *Wood, Werkman, Hemingway, and Nier*, 31
Norris, William P. See *Carter, Glick, Norris, and Phillips*, 449

O

O'Kane, D. J., and **Umbreit, W. W.** Transformations of phosphorus during glucose fermentation by living cells of *Streptococcus faecalis*, 25
Overman, Andrea. Influence of some dietary factors on the development of rancidity in the fat of the white rat, 441
Overman, Ralph S., Stahmann, Mark Arnold, Sullivan, William R., Huebner, Charles Ferdinand, Campbell, Harold A., and **Link, Karl Paul.** Studies on the hemorrhagic sweet clover disease. VII. The effect of 3,3′ - methylenebis(4 - hydroxycoumarin) on the prothrombin time of the plasma of various animals, 941

P

Palmer, Albert H. See *Cannan, Palmer, and Kibrick*, 803
Pearlman, W. H., Pincus, Gregory, and Werthessen, Nicholas T. The isolation of allopregnanol-3(β)-one-20 from human pregnancy urine, 649
Perlmann, Gertrude E., and **Ferry, Ronald M.** A note on the separation of kidney phosphatases, 513
Perlzweig, William A. See *Huff and Perlzweig*, 401
Peterson, W. H. See *Shull, Hutchings, and Peterson*, 913
Phillips, George E. See *Carter, Glick, Norris, and Phillips*, 449
Pincus, Gregory. See *Pearlman, Pincus, and Werthessen*, 649
Pitesky, Isadore. See *Flox, Pitesky, and Alving*, 147

Potter, V. R., and **DuBois, K. P.** The quantitative determination of cytochrome *c*, 417
— and **Schneider, W. C.** Studies on the mechanism of hydrogen transport in animal tissues. V. Dilution effects in the succinoxidase system, 543
—. See *Axelrod, Potter, and Elvehjem*, 85

R

Reed, Gerald. The polarographic estimation of cystine in urine, 61
Reinecke, Roger M. The application of the skatole color reaction to the determination of fructose in blood, 487
Reinhart, Harry L. See *Shinowara, Jones, and Reinhart*, 921
Ross, William F. See *Tracy and Ross*, 871

S

Saidel, Leo J. See *Nicolet, Shinn, and Saidel*, 609
Sanigar, E. B. See *Krejci, Stock, Sanigar, and Kraemer*, 785
Schaefer, A. E. See *McKibbin, Schaefer, Frost, and Elvehjem*, 77
Schneider, A. K., and **Spielman, M. A.** The synthesis of some methylated fatty acids, 345
Schneider, W. C. See *Potter and Schneider*, 543
Scholander, P. F. Method for the determination of the gas content of tissue, 427
—, **Irving, Laurence**, and **Grinnell, S. W.** Aerobic and anaerobic changes in seal muscles during diving, 431
Schultze, M. O. The isolation of protoporphyrin IX from feces of normal and anemic rats, 89
— and **Simmons, S. J.** The use of radioactive copper in studies on nutritional anemia of rats, 97
Scott, D. A. Crystalline preparation of carbonic anhydrase, 959
Scudi, John V., Buhs, Rudolf P., and **Hood, Dorothy B.** The metabolism of vitamin B_6, 323
Sendroy, Julius, Jr. Note on the photoelectric microdetermination of chloride in biological fluids, 171
— and **Alving, Alf S.** Photoelectric microdetermination of iodate and iodine, 159
Sharp, D. G., Cooper, Gerald R., and **Neurath, Hans.** The electrophoretic properties of serum proteins. I. Normal horse pseudoglobulin GI, 203
—, **Hebb, M. H., Taylor, A. R.**, and **Beard, J. W.** Progressive boundary spread in electrophoresis of proteins in solution, 217
—, **Taylor, A. R., Beard, Dorothy**, and **Beard, J. W.** Electrophoresis of the rabbit papilloma virus protein, 193
Shaw, J. C. A comparison of the acetone body metabolism of the lactating mammary gland of the normal cow with that of the cow with ketosis, 53
Shinn, Leo A. See *Nicolet and Shinn*, 139
—. See *Nicolet, Shinn, and Saidel*, 609
Shinowara, George Y., Jones, Lois M., and **Reinhart, Harry L.** The estimation of serum inorganic phosphate and "acid" and "alkaline" phosphatase activity, 921
—. See *Jones and Shinowara*, 935
Shull, G. M., Hutchings, B. L., and **Peterson, W. H.** A microbiological assay for biotin, 913
Silber, Robert H., and **Unna, Klaus.** Studies on the urinary excretion of pantothenic acid, 623
Simmons, S. J. See *Schultze and Simmons*, 97

Simpson, Miriam E. See *Fraenkel-Conrat, Simpson, and Evans*, 107
Sinclair, R. G., and **Dolan, Margery.** The so called ether-insoluble phospholipids in blood and tissues, 659
Smythe, C. V. The utilization of cysteine and cystine by rat liver with the production of hydrogen sulfide, 387
— and **King, C. G.** A study of ascorbic acid synthesis by animal tissue *in vitro*, 529
Solomon, A. K. See *Vennesland, Solomon, Buchanan, Cramer, and Hastings*, 371
—. See *Vennesland, Solomon, Buchanan, and Hastings*, 379
Somogyi, Michael. See *Stark and Somogyi*, 579
Spielman, M. A. See *Schneider and Spielman*, 345
Spilman, Frances. See *Huff and Perlzweig*, 401
Stahmann, Mark Arnold. See *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link*, 941
Stanley, W. M. See *Cohen and Stanley*, 863
Stark, Irene E. Equilibria in diastatic reactions, 569
— and **Somogyi, Michael.** Note on the fermentation of maltose and glucose in alkaline solutions, 579
Stetten, DeWitt, Jr. Biological synthesis of choline by rats on diets with and without adequate lipotropic methyl, 629
Stock, A. H. Studies on the hemolytic streptococcus. IV. Further purification and concentration of scarlet fever toxin, 777
—. See *Krejci, Stock, Sanigar, and Kraemer*, 785
Stoddard, M. Palmer, and **Dunn, Max S.** Quantitative investigations of amino acids and peptides. VIII. The solubility and specific rotations of *l*(−)-leucine at twenty-five degrees, 329
Strong, F. M. See *Feeney and Strong*, 961
Stumpf, P. K. See *Green and Stumpf*, 355
Sullivan, M. X. See *Hess and Sullivan*, 3
Sullivan, William R. See *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link*, 941
Swendseid, Marian E., Barnes, Richard H., Hemingway, Allan, and **Nier, A. O.** The formation of acetone bodies from acetic acid, 47

T

Taylor, A. R. See *Sharp, Hebb, Taylor, and Beard*, 217
—. See *Sharp, Taylor, Beard, and Beard*, 193
Teague, D. Maxwell. See *Beach and Teague*, 277
Tishler, Max. See *Waksman and Tishler*, 519
Tompkins, Edward R., and **Kirk, Paul L.** Quantitative drop analysis. XVI. An improved diffusion method for total nitrogen, 477
Totter, John R. See *Borchers, Totter, and Berg*, 697
Tracy, Ann H., and **Ross, William F.** Carbon suboxide and proteins. V. Further study of the nature of the reaction, 871
Treadwell, C. R., Groothuis, Marjorie, and **Eckstein, H. C.** The influence of supplementary casein, cystine, and methionine on liver lipid content, 653

U

Umbreit, W. W. See *O'Kane and Umbreit*, 25
Unna, Klaus. See *Silber and Unna*, 623

V

Vandenbelt, J. M. See *Bird, Vandenbelt, and Emmett,* 317

Van Slyke, Donald D., and **Kreysa, Frank J.** Microdetermination of calcium by precipitation as picrolonate and estimation of the precipitated carbon by manometric combustion, 765

Vennesland, Birgit, Solomon, A. K., Buchanan, John M., Cramer, Richard D., and **Hastings, A. Baird.** Metabolism of lactic acid containing radioactive carbon in the α or β position, 371

—, —, —, and **Hastings, A. Baird.** Glycogen formation from glucose in the presence of radioactive carbon dioxide, 379

du Vigneaud, Vincent. See *Melville, Hofmann, Hague, and du Vigneaud,* 615

W

Waksman, Selman A., and **Tishler, Max.** The chemical nature of actinomycin, an antimicrobial substance produced by *Actinomyces antibioticus,* 519

Walker, Burnham S. See *Ellis and Walker,* 291

Warner, Robert C. The alkaline hydrolysis of egg albumin, 741

—. The kinetics of the hydrolysis of urea and of arginine, 705

— and **Cannan, R. Keith.** The formation of ammonia from proteins in alkaline solution, 725

Warren, Stafford L. See *Mann, Leblond, and Warren,* 905

Werkman, C. H. See *Wood, Werkman, Hemingway, and Nier,* 31

Werthessen, Nicholas T. See *Pearlman, Pincus, and Werthessen,* 649

Wilson, D. Wright. See *Lundgren, Gurin, Bachman, and Wilson,* 367

Winnick, Theodore. Microdiffusion methods based on the bisulfite reaction. II. Determination of lactic acid by oxidation with ceric sulfate, 451

—. III. Determination of threonine by oxidation with periodate, 461

Winter, Irwin C. Fat metabolism after liver injury. Fatty acid utilization by rats treated with carbon tetrachloride on diets which were fat-free or contained fats with high or low iodine numbers, 17

Wood, H. G., Werkman, C. H., Hemingway, Allan, and **Nier, A. O.** Fixation of carbon dioxide by pigeon liver in the dissimilation of pyruvic acid, 31

Woolley, D. W., and **Longsworth, L. G.** Isolation of an antibiotin factor from egg white, 285

—. See *Folch and Woolley,* 963

Wright, Lemuel D. The effect of glucose administration on the level of blood pantothenic acid, 445

Y

Young, E. Gordon, and **Conway, Catherine F.** On the estimation of allantoin by the Rimini-Schryver reaction, 839

Z

Zittle, Charles A., and **Harris, Tzvee N.** The antigenic structure of hemolytic streptococci of Lancefield Group A. X. The purification and certain properties of the group-specific polysaccharide, 823

INDEX TO SUBJECTS

A

Acetic acid: Acetone body formation, relation, *Swendseid, Barnes, Hemingway, and Nier,* 47
Mercapto-, iron determination, spectrophotometric, use in, *Koenig and Johnson,* 233
Acetoacetic acid: β-Hydroxybutyric acid, ratio, blood and urine, Primates, *Friedemann,* 635
Acetone body: Formation, acetic acid relation, *Swendseid, Barnes, Hemingway, and Nier,* 47
Metabolism, mammary gland, lactating, ketosis effect, *Shaw,* 53
Acid-base equilibrium: Jejunal secretions, *McGee and Hastings,* 893
Actinomyces antibioticus: Actinomycin, *Waksman and Tishler,* 519
Actinomycin: *Waksman and Tishler,* 519
Albumin: Blood serum, denaturation and reversal, *Neurath, Cooper, and Erickson,* 249
Egg. *See* Egg albumin
Alcohol(s): Tissue vitamin A, effect, *Baumann, Foster, and Moore,* 597
Allantoin: Determination, Rimini-Schryver reaction, *Young and Conway,* 839
Allopregnanol-3(β)-one-20: Urine, pregnancy, isolation, *Pearlman, Pincus, and Werthessen,* 649
Amino acid(s): *Stoddard and Dunn,* 329
Cystine excretion, effect, *Hess and Sullivan,* 3
Ammonia: Formation, proteins, alkaline solution, *Warner and Cannan,* 725
Amylase: Pancreas, *Little and Caldwell,* 585
Anemia: Feces protoporphyrin IX, isolation, *Schultze,* 89
Nutritional, radioactive copper in study, *Schultze and Simmons,* 97
Pyridoxine-produced, *McKibbin, Schaefer, Frost, and Elvehjem,* 77
Anhydrase: Carbonic, crystalline, *Scott,* 959
Anthracene: Dibenz-, tissue vitamin A, effect, *Baumann, Foster, and Moore,* 597
Antibiotin: Factor, egg white, isolation, *Woolley and Longsworth,* 285
Antigen: Hemolytic streptococcus, Lancefield Group A, structure, *Zittle and Harris,* 823
Araban: Oats, *Morris,* 881
Arachidonic acid: Chemical constitution, *Mowry, Brode, and Brown,* 679
Arginine: Hydrolysis, kinetics, *Warner,* 705
Ascorbic acid: Synthesis, tissue, *in vitro, Smythe and King,* 529
Avena sativa: *See* Oats

B

Bacillus: *See also Lactobacillus*
Bile: Estrogens, estrone administration effect, *Longwell and McKee,* 757

Biotin: Anti-, factor, egg white, isolation, *Woolley and Longsworth*, 285
Determination, microbiological, *Shull, Hutchings, and Peterson*, 913
Milk, isolation, *Melville, Hofmann, Hague, and du Vigneaud*, 615
Bisulfite reaction: Diffusion, micro-, methods, *Winnick*, 451, 461
Blood: Diodrast determination, colorimetric, *Flox, Pitesky, and Alving*, 147
Fructose, determination, skatole color reaction in, *Reinecke*, 487
β-Hydroxybutyric to acetoacetic acid ratio, Primates, *Friedemann*, 635
Iodide determination, colorimetric, *Flox, Pitesky, and Alving*, 147
Iodine, fractionation, alcohol, *Boyd and Clarke*, 619
Lactobacillus casei ϵ-stimulatory substance, *Feeney and Strong*, 961
Lipids, overnutrition effect, *Entenman and Chaikoff*, 129
Pantothenic acid, glucose administration effect, *Wright*, 445
Phospholipids, ether-insoluble, *Sinclair and Dolan*, 659
Blood plasma: Prothrombin, 3,3′-methylenebis (4 - hydroxycoumarin), effect, *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link*, 941
Blood serum: Albumin, denaturation and reversal, *Neurath, Cooper, and Erickson*, 249
Phosphatase, acid, determination, *Shinowara, Jones, and Reinhart*, 921
—, alkaline, determination, *Shinowara, Jones, and Reinhart*, 921
—, —, hypophysectomy effect, *Jones and Shinowara*, 935
Blood serum—*continued:*
Phosphate, inorganic, determination, *Shinowara, Jones, and Reinhart*, 921
—, —, hypophysectomy effect, *Jones and Shinowara*, 935
Proteins, electrophoresis, *Sharp, Cooper, and Neurath*, 203
Pseudoglobulin, denaturation and reversal, *Neurath, Cooper, and Erickson*, 265
— GI, electrophoresis, *Sharp, Cooper, and Neurath*, 203
Brain: Phosphatide, inositol, *Folch and Woolley*, 963

C

Calcium: Determination, micro-, *Van Slyke and Kreysa*, 765
Liver, distribution, *Eichelberger and McLean*, 467
Muscle, distribution, *Eichelberger and McLean*, 467
Utilization, intestine hydrogen ion concentration relation, *Jones*, 557
Carbohydrate(s): Metabolism, thiamine effect, *Harper*, 239
Carbon: Radioactive, lactic acid metabolism, use in, *Vennesland, Solomon, Buchanan, Cramer, and Hastings*, 371
Carbon dioxide: Liver, fixation, pyruvic acid dissimilation, *Wood, Werkman, Hemingway, and Nier*, 31
Radioactive, glycogen formation, glucose and, relation, *Vennesland, Solomon, Buchanan, and Hastings*, 379
Tension, jejunal secretions, *McGee and Hastings*, 893
Carbonic anhydrase: Crystalline, *Scott*, 959
Carbon suboxide: Proteins and, *Tracy and Ross*, 871
— —, reaction, nature, *Tracy and Ross*, 871

Carbon tetrachloride: Fatty acid utilization, dietary fat and, relation, *Winter*, 17
Casein: Dietary, liver lipid, effect, *Treadwell, Groothuis, and Eckstein*, 653
Ceric sulfate: Lactic acid determination, use in, *Winnick*, 451
Chloride(s): Biological fluids, determination, micro-, photoelectric, *Sendroy*, 171
Choline: -Deficient diet, biochemical defect, *Jacobi and Baumann*, 65
Synthesis, tissue, dietary lipotropic methyl effect, *Stetten*, 629
Clover: Sweet, hemorrhagic disease, *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link*, 941
Copper: Radioactive, anemia, nutritional, use in study, *Schultze and Simmons*, 97
Cyanide: Ferriprotoporphyrin nitrogenous derivatives, reaction, *Drabkin* 855
Cysteine: Utilization, liver, hydrogen sulfide production, relation, *Smythe*, 387
Cystine: Dietary, liver lipid, effect, *Treadwell, Groothuis, and Eckstein*, 653
Excretion, amino acid effect, *Hess and Sullivan*, 3
Peanut proteins, *Brown*, 299
Urine, determination, polarographic, *Reed*, 61
Utilization, liver, hydrogen sulfide production, relation, *Smythe*, 387
Cystinuria: *Hess and Sullivan*, 3
Cytochrome: *c*, determination, *Potter and DuBois*, 417
—, peroxidase, *Abrams, Altschul, and Hogness*, 303

D

Diastatic reaction(s): Equilibria, *Stark*, 569
Dibenzanthracene: Tissue vitamin A, effect, *Baumann, Foster, and Moore*, 597
Diet: Fat rancidity, effect, *Overman*, 441
Diodrast: Blood, determination, colorimetric, *Flox, Pitesky, and Alving*, 147
Urine, determination, colorimetric, *Flox, Pitesky, and Alving*, 147
Diving: Seal muscle metabolism, *Scholander, Irving, and Grinnell*, 431
Drop analysis: Quantitative, *Tompkins and Kirk*, 477

E

Egg: White, antibiotin factor, isolation, *Woolley and Longsworth*, 285
Yolk, phosphorus compounds, formation, *Chargaff*, 505
Egg albumin: Hydrolysis, alkaline, *Warner*, 741
Enzyme(s): *See also* Amylase, Anhydrase, Hippuricase, Nucleophosphatase, Peroxidase, Phosphatase, Phosphorylase, Succinoxidase
Estrogen(s): Bile, estrone administration effect, *Longwell and McKee*, 757
Urine, estrone administration effect, *Longwell and McKee*, 757
Estrone: Bile estrogens, administration effect, *Longwell and McKee*, 757
Urine estrogens, administration effect, *Longwell and McKee*, 757

F

Fat(s): Dietary, carbon tetrachloride-treated rats, fatty acid utilization, effect, *Winter*, 17
Metabolism, liver injury effect, *Winter*, 17
Rancidity, diet effect, *Overman*, 441

Fatty acid(s): Chemistry, *Mowry, Brode, and Brown,* 671, 679
Methylated, synthesis, *Schneider and Spielman,* 345
Utilization, carbon tetrachloride-treated rats, dietary fat effect, *Winter,* 17
Feces: Protoporphyrin IX isolation, normal and anemic rats, *Schultze,* 89
Ferriprotoporphyrin: Nitrogenous derivatives, cyanide reaction with, *Drabkin,* 855
Fructose: Blood, determination, skatole color reaction in, *Reinecke,* 487

G

Gas: Tissue, determination, *Scholander,* 427
Globulin: *See also* Lactoglobulin, Pseudoglobulin
Glucose: Blood pantothenic acid, administration effect, *Wright,* 445
Fermentation, alkaline solutions, *Stark and Somogyi,* 579
—, *Streptococcus faecalis,* phosphorus transformation, *O'Kane and Umbreit,* 25
Glycogen formation, radioactive carbon dioxide and, relation, *Vennesland, Solomon, Buchanan, and Hastings,* 379
Glutamic acid: Hydroxy-, milk proteins, *Nicolet and Shinn,* 139
Glycogen: Formation, glucose and radioactive carbon dioxide, relation, *Vennesland, Solomon, Buchanan, and Hastings,* 379
Gonadotropic hormone: Urine, pregnancy, *Lundgren, Gurin, Bachman, and Wilson,* 367
Growth: Factor, *Lactobacillus casei, Clarke, Lechycka, and Light,* 957

H

Hemorrhage: Sweet clover disease, *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link,* 941
Hippuric acid: Ring-substituted derivatives, hippuricase action, *Ellis and Walker,* 291
Hippuricase: Hippuric acid ring-substituted derivatives, action, *Ellis and Walker,* 291
Hydrogen: Tissue transport mechanism, *Potter and Schneider,* 543
Hydrogen ion concentration: Intestine, calcium and phosphorus utilization, relation, *Jones,* 557
Hydrogen peroxide: Peroxidase-, complex, *Abrams, Altschul, and Hogness,* 303
Hydrogen sulfide: Production, liver cysteine and cystine utilization, relation, *Smythe,* 387
Hydroxybutyric acid: β-, acetoacetic acid, ratio, blood and urine, Primates, *Friedemann,* 635
Hydroxyglutamic acid: Milk proteins, *Nicolet and Shinn,* 139
Hypophysectomy: Blood serum inorganic phosphate, effect, *Jones and Shinowara,* 935
— — phosphatase, alkaline, effect, *Jones and Shinowara,* 935

I

Inositol: Brain phosphatide, *Folch and Woolley,* 963
Intestine: Hydrogen ion concentration, calcium and phosphorus utilization, relation, *Jones* 557
Nucleophosphatase, tobacco mosaic virus, action, *Cohen and Stanley,* 863
See also Jejunum
Iodate: Determination, micro-, photoelectric, *Sendroy and Alving,* 159

Iodide(s): Blood, determination, colorimetric, *Flox, Pitesky, and Alving,* 147
Urine, determination, colorimetric, *Flox, Pitesky, and Alving,* 147
Iodine: Blood, fractionation, alcohol, *Boyd and Clarke,* 619
Determination, micro-, photoelectric, *Sendroy and Alving,* 159
Thyroid gland, metabolism, *Mann, Leblond, and Warren,* 905
Iron: Determination, spectrophotometric, *Koenig and Johnson,* 233
—, —, mercaptoacetic acid use, *Koenig and Johnson,* 233

J

Jejunum: Secretions, acid-base balance, *McGee and Hastings,* 893
—, carbon dioxide tension, *McGee and Hastings,* 893

K

Ketosis: Mammary gland acetone body metabolism, effect, *Shaw,* 53
Primates, *Friedemann,* 635
Kidney: Phosphatases, separation, *Perlmann and Ferry,* 513

L

Lactation: Mammary gland, acetone body metabolism, ketosis effect, *Shaw,* 53
Lactic acid: Determination, microdiffusion, ceric sulfate use, *Winnick,* 451
Metabolism, radioactive carbon-containing, *Vennesland, Solomon, Buchanan, Cramer, and Hastings,* 371
Lactobacillus casei: ϵ, stimulatory substance, blood, *Feeney and Strong,* 961
Growth factor, *Clarke, Lechycka, and Light,* 957
Lactogenic hormone: Reducing groups, thiols, effect, *Fraenkel-Conrat,* 119
Thiol compounds, effect, *Fraenkel-Conrat, Simpson, and Evans,* 107
Lactoglobulin: β-, hydrogen ion dissociation curve, *Cannan, Palmer, and Kibrick,* 803
Lancefield: Group A hemolytic streptococcus, antigenic structure, *Zittle and Harris,* 823
— — — —, specific polysaccharide, purification and properties, *Zittle and Harris,* 823
Lead: Poisoning, lead citrate complex ion, rôle, *Kety,* 181
Lead citrate: Ion complex, lead poisoning, rôle, *Kety,* 181
Leucine: *l*(−)-, solubility, *Stoddard and Dunn,* 329
—, specific rotation, *Stoddard and Dunn,* 329
Lichenin: Oats, *Morris,* 881
Lipid(s): Blood, overnutrition effect, *Entenman and Chaikoff,* 129
Liver, dietary casein, cystine, and methionine, effect, *Treadwell, Groothuis, and Eckstein,* 653
Metabolism, nutrition state, relation, *Entenman and Chaikoff,* 129
Phospho-. *See* Phospholipid
Lipoprotein(s): *Chargaff,* 491
Liver: Calcium distribution, *Eichelberger and McLean,* 467
Cysteine utilization, hydrogen sulfide production, relation, *Smythe,* 387
Cystine utilization, hydrogen sulfide production, relation, *Smythe,* 387
Injury, fat metabolism, effect, *Winter,* 17
Lipid, dietary casein, cystine, and methionine, effect, *Treadwell, Groothuis, and Eckstein,* 653

Liver—*continued:*
Magnesium distribution, *Eichelberger and McLean*, 467
Pyruvic acid dissimilation, carbon dioxide fixation, *Wood, Werkman, Hemingway, and Nier*, 31

M

Magnesium: Liver, distribution, *Eichelberger and McLean*, 467
Muscle, distribution, *Eichelberger and McLean*, 467
Maltose: Fermentation, alkaline solutions, *Stark and Somogyi*, 579
Mammary gland: Lactating, acetone body metabolism, ketosis effect, *Shaw*, 53
Meigs, Edward Browning: Obituary, *Howe*, 1
Mercaptoacetic acid: Iron determination, spectrophotometric, use in, *Koenig and Johnson*, 233
Methionine: Determination, gravimetric, *Beach and Teague*, 277
Dietary, liver lipid, effect, *Treadwell, Groothuis, and Eckstein*, 653
Peanut proteins, *Brown*, 299
Methyl arachidonate: Spectroscopy, *Mowry, Brode, and Brown*, 671
Methylenebis (4 - hydroxycoumarin): 3,3′-, blood plasma prothrombin, effect, *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link*, 941
Milk: Biotin isolation, *Melville, Hofmann, Hague, and du Vigneaud*, 615
Proteins, hydroxyglutamic acid, *Nicolet and Shinn*, 139
Mosaic: Tobacco, virus, intestine nucleophosphatase action, *Cohen and Stanley*, 863
Muscle: Calcium distribution, *Eichelberger and McLean*, 467
Magnesium distribution, *Eichelberger and McLean*, 467
Muscle—*continued:*
Phosphorylase, crystalline, *Green, Cori, and Cori*, 447
Seal, metabolism, diving effect, *Scholander, Irving, and Grinnell*, 431

N

Nicotinic acid: Metabolism, *Huff and Perlzweig*, 401
Synthesis, rat, *Huff and Perlzweig*, 401
Nitrogen: Total, determination, diffusion method, *Tompkins and Kirk*, 477
Nucleophosphatase: Intestine, tobacco mosaic virus, action, *Cohen and Stanley*, 863
Nucleotide(s): Triphosphopyridine, determination, micro-, *Haas, Harrer, and Hogness*, 835
Nutrition: Lipid metabolism, relation, *Entenman and Chaikoff*, 129
See also Overnutrition

O

Oat(s): Araban, *Morris*, 881
Lichenin, *Morris*, 881
Obituary: Meigs, Edward Browning, *Howe*, 1
Overnutrition: Blood lipids, effect, *Entenman and Chaikoff*, 129
Oxidase: Succin-, system, dilution effects, *Potter and Schneider*, 543
—, —, riboflavin deficiency, *Axelrod, Potter, and Elvehjem*, 85

P

Pancreas: Amylase, *Little and Caldwell*, 585
Pantothenic acid: Blood, glucose administration effect, *Wright*, 445
Urine, *Silber and Unna*, 623
Papilloma: Virus protein, rabbit, electrophoresis, *Sharp, Taylor, Beard, and Beard*, 193

Peanut: Proteins, threonine, serine, cystine, and methionine, *Brown*, 299
Peptide(s): *Stoddard and Dunn*, 329
Periodate: Threonine determination, microdiffusion, use in, *Winnick*, 461
Peroxidase: Cytochrome *c*, *Abrams, Altschul, and Hogness*, 303
-Hydrogen peroxide complex, *Abrams, Altschul, and Hogness*, 303
Phosphatase(s): Acid, blood serum, determination, *Shinowara, Jones, and Reinhart*, 921
Alkaline, blood serum, determination, *Shinowara, Jones, and Reinhart*, 921
—, — —, hypophysectomy effect, *Jones and Shinowara*, 935
Kidney, separation, *Perlmann and Ferry*, 513
Nucleo-, intestine, tobacco mosaic virus, action, *Cohen and Stanley*, 863
Phosphate(s): Inorganic, blood serum, determination, *Shinowara, Jones, and Reinhart*, 921
—, — —, hypophysectomy effect, *Jones and Shinowara*, 935
Phosphatide(s): Brain, inositol, *Folch and Woolley*, 963
Phospholipid(s): Ether - insoluble, blood and tissues, *Sinclair and Dolan*, 659
Phosphorus: Glucose fermentation by *Streptococcus faecalis*, transformation, *O'Kane and Umbreit*, 25
Utilization, intestine hydrogen ion concentration relation, *Jones*, 557
Phosphorus compound(s): Egg yolk, formation, *Chargaff*, 505
Phosphorylase: Crystalline, muscle, *Green, Cori, and Cori*, 447
Phosphorylase—*continued:*
Starch, potato, *Green and Stumpf*, 355
Polysaccharide(s): Hemolytic streptococcus, Lancefield Group A-specific, purification and properties, *Zittle and Harris*, 823
Porphyrin: Ferriproto-, nitrogenous derivatives, cyanide reaction with, *Drabkin*, 855
Proto-, IX, feces, normal and anemic rats, isolation, *Schultze*, 89
Porphyrindin: Reactivity, proteins, denatured, presence, *Greenstein and Jenrette*, 175
Potato: Starch phosphorylase, *Green and Stumpf*, 355
Pregnancy: Urine, allopregnanol-3(β)-one-20 isolation, *Pearlman, Pincus, and Werthessen*, 649
—, gonadotropic hormone, *Lundgren, Gurin, Bachman, and Wilson*, 367
Pregnanol-3(β)-one-20: Allo-, urine, pregnancy, isolation, *Pearlman, Pincus, and Werthessen*, 649
Primate(s): Blood β-hydroxybutyric to acetoacetic acid ratio, *Friedemann*, 635
Ketosis, *Friedemann*, 635
Urine-β-hydroxybutyric to acetoacetic acid ratio, *Friedemann*, 635
Protein(s): Ammonia formation, alkaline solution, *Warner and Cannan*, 725
Blood serum, electrophoresis, *Sharp, Cooper, and Neurath*, 203
Carbon suboxide and, *Tracy and Ross*, 871
— — —, reaction, nature, *Tracy and Ross*, 871
Denaturation and reversal, *Neurath, Cooper, and Erickson*, 249, 265

Protein(s)—*continued:*
Denatured, porphyrindin reactivity in presence, *Greenstein and Jenrette,* 175
Electrophoresis, boundary spread, *Sharp, Hebb, Taylor, and Beard,* 217
Lipo-, *Chargaff,* 491
Milk, hydroxyglutamic acid, *Nicolet and Shinn,* 139
Peanut, threonine, serine, cystine, and methionine, *Brown,* 299
Serine, alkali effect, *Nicolet, Shinn, and Saidel,* 609
Threonine, alkali effect, *Nicolet, Shinn, and Saidel,* 609
Virus, rabbit papilloma, electrophoresis, *Sharp, Taylor, Beard, and Beard,* 193
Prothrombin: Blood plasma, 3,3′-methylenebis (4 - hydroxycoumarin), effect, *Overman, Stahmann, Sullivan, Huebner, Campbell, and Link,* 941
Protoporphyrin: IX, feces, normal and anemic rats, isolation, *Schultze,* 89
Pseudoglobulin: Blood serum, denaturation and reversal, *Neurath, Cooper, and Erickson,* 265
GI, blood serum, electrophoresis, *Sharp, Cooper, and Neurath,* 203
Pyridine: Triphospho-, nucleotide, determination, micro-, *Haas, Harrer, and Hogness,* 835
Pyridoxine: Anemia from, *McKibbin, Schaefer, Frost, and Elvehjem,* 77
Determination, colorimetric, Scudi method, adaptation, *Bird, Vandenbelt, and Emmett,* 317
Pyruvic acid: Liver, dissimilation, carbon dioxide fixation, *Wood, Werkman, Hemingway, and Nier,* 31

R

Riboflavin: Deficiency, succinoxidase system, *Axelrod, Potter, and Elvehjem,* 85

S

Scarlet fever: Toxin, erythrogenic, isolation, electrophoretic, *Krejci, Stock, Sanigar, and Kraemer,* 785
—, —, properties, *Krejci, Stock, Sanigar, and Kraemer,* 785
—, purification, *Stock,* 777
Seal: Muscle, metabolism, diving effect, *Scholander, Irving, and Grinnell,* 431
Serine: Peanut proteins, *Brown,* 299
Proteins, alkali effect, *Nicolet, Shinn, and Saidel,* 609
Skatole: Color reaction, blood fructose determination, use in, *Reinecke,* 487
Spectrophotometry: *Drabkin,* 855
Sphingosine: Chemical constitution, *Carter, Glick, Norris, and Phillips,* 449
Starch: Phosphorylase, potato, *Green and Stumpf,* 355
Streptococcus: Hemolytic, *Stock,* 777 *Krejci, Stock, Sanigar, and Kraemer,* 785
—, Lancefield Group A, antigenic structure, *Zittle and Harris,* 823
—, — Group A-specific polysaccharide, purification and properties, *Zittle and Harris,* 823
Streptococcus faecalis: Glucose fermentation by, phosphorus transformation, *O'Kane and Umbreit,* 25
Succinoxidase: System, dilution effects, *Potter and Schneider,* 543
—, riboflavin deficiency, *Axelrod, Potter, and Elvehjem,* 85

T

Thiamine: Carbohydrate metabolism, effect, *Harper*, 239

Thiol(s): Lactogenic hormone reducing groups, effect, *Fraenkel-Conrat*, 119

Thiol compound(s): Lactogenic hormone, effect, *Fraenkel-Conrat, Simpson, and Evans*, 107

Threonine: Determination, microdiffusion, periodate use, *Winnick*, 461

Peanut proteins, *Brown*, 299

Proteins, alkali effect, *Nicolet, Shinn, and Saidel*, 609

Zein hydrolysates, autoclaving effect, *Borchers, Totter, and Berg*, 697

Thyroid: Iodine metabolism, *Mann, Leblond, and Warren*, 905

Tissue(s): Gas determination, *Scholander*, 427

Phospholipids, ether - insoluble, *Sinclair and Dolan*, 659

Tobacco: Mosaic virus, intestine nucleophosphatase action, *Cohen and Stanley*, 863

Toxin: Erythrogenic, scarlet fever, isolation, electrophoretic, *Krejci, Stock, Sanigar, and Kraemer*, 785

—, — —, properties, *Krejci, Stock, Sanigar, and Kraemer*, 785

Scarlet fever, isolation, *Stock*, 777

Triphosphopyridine: Nucleotide, determination, micro-, *Haas, Harrer, and Hogness*, 835

U

Urea: Hydrolysis, kinetics, *Warner*, 705

Urine: Cystine determination, polarographic, *Reed*, 61

Diodrast determination, colorimetric, *Flox, Pitesky, and Alving*, 147

Estrogens, estrone administration effect, *Longwell and McKee*, 757

β-Hydroxybutyric to acetoacetic acid ratio, Primates, *Friedemann*, 635

Iodide determination, colorimetric, *Flox, Pitesky, and Alving*, 147

Pantothenic acid, *Silber and Unna*, 623

Pregnancy, allopregnanol-3(β)-one-20 isolation, *Pearlman, Pincus, and Werthessen*, 649

—, gonadotropic hormone, *Lundgren, Gurin, Bachman, and Wilson*, 367

V

Virus: Protein, rabbit papilloma, electrophoresis, *Sharp, Taylor, Beard, and Beard*, 193

Tobacco mosaic, intestine nucleophosphatase action, *Cohen and Stanley*, 863

Vitamin(s): A, tissue, alcohol effect, *Baumann, Foster, and Moore*, 597

—, —, dibenzanthracene effect, *Baumann, Foster, and Moore*, 597

B_6, metabolism, *Scudi, Buhs, and Hood*, 323

Z

Zein: Hydrolysates, optical rotation, hydrolysis and heating effect, *Borchers and Berg*, 693

Threonine, hydrolysates, autoclaving effect, *Borchers, Totter, and Berg*, 697
